H&M in China

In March 2021, the Chinese government blocked access to H&M on leading e-commerce, ride-hailing, daily-deals, and map sites. The online blocking and calls for customer boycotts were in response to H&M's September 2020 statement that it would no longer source cotton from Xinjiang because of concerns about forced labor. H&M, which operated more than 500 stores in China, issued a statement:

We are working together with our colleagues in China to do everything we can to manage the current challenges and find a way forward. China is a very important market to us and our long-term commitment to the country remains strong. Having been present there for more than thirty years, we have witnessed remarkable progress within the Chinese textile industry. Being at the forefront of innovation and technology, China will clearly continue to play an important role in further developing the entire industry. We are proud our suppliers are being part of that development and we want to continue contributing to driving progress together with our partners and stakeholders in the country. We want to be a responsible buyer, in China and elsewhere, and are now building forward-looking strategies and actively working on next steps with regards to material sourcing. Together with all relevant stakeholders, we want to collaborate to be part of the solution and jointly build a more sustainable fashion industry.

As a global company, we comply with local laws and regulatory frameworks in all the markets where we operate. Our company values are built on trust, respect, integrity, and dialogue. We wish to focus on our core business and on what we do best—bringing fashion and design to our customers all around the world. We are dedicated to regaining the trust and confidence of our customers, colleagues, and business partners in China. By working together with stakeholders and partners, we believe we can take steps in our joint efforts to develop the fashion industry, as well as serve our customers and act in a respectful way.¹

H&M

H&M, part of H&M Group, was founded in Sweden in 1947. H&M started with a single store called Hennes (Swedish for hers). In 1968, Hennes acquired the Stockholm-based hunting apparel and fishing equipment retailer Mauritz Widforss and the name was changed to Hennes & Mauritz, shortened to H&M a few years later. Through the 1980s and 90s, the company expanded to several European countries. In 2000, H&M opened its first store outside Europe in New York City, and in 2007 opened stores in Shanghai and Hong Kong.

H&M Group's 4,950 stores included eight brands focused mainly on clothing and fashion. H&M operated 4,300 stores in 74 countries and 52 online markets. The group had sales SEK 187 billion (US\$23 billion) in 2020.

H&M Brand

H&M described its brand as follows:

H&M is a fashion brand, offering the latest styles and inspiration for all—always. Customers will find everything from fashion pieces and unique designer collaborations to affordable wardrobe essentials, complete-the-look accessories, and motivational workout wear. All seasons, all styles, all welcome! But H&M is more than just fashion. With price, quality, and sustainability deeply rooted in its DNA, H&M is not only a possibility for everyone to explore their personal style, but it also offers a chance to create a more sustainable fashion future.²

Along with competitors like Zara, Forever 21, and Primark, H&M was known as a fast fashion brand—defined as “a design, manufacturing, and marketing method focused on rapidly producing high volumes of clothing.... [utilizing] trend replication and low-quality materials in order to bring inexpensive styles to the public.”³ The goal of fast fashion is frequent store visits by customers who are looking for trendy items that will not stay long on the shelves. H&M was able to design and produce new styles in just a few weeks. Unlike Zara, one of its main competitors, H&M did not own any factories and, instead, relied on a network of independent suppliers.

H&M had two main collections, one in the spring and one in the fall. H&M had two design processes: long-term planning of collections, and real-time design driven by customer trends in the market.⁴ H&M produced about 80% of its inventory in advance; these products were the basic clothing items that could be found in most of the stores. About 20% of H&M products were based on current fashion trends and were produced in smaller quantities with short lead times.

As H&M expanded internationally in the 2000s, the company sought to enhance its image of “cheap chic” by partnering with fashion designers and pop stars, including Karl Lagerfeld, Stella McCartney, Versace, Madonna, Kylie Minogue, Lana del Ray, and Beyoncé. In 2020, H&M collaborated with Lebanese designer Sandra Mansour, the first time the company partnered with an Arab designer.

Sourcing

H&M operated 21 production offices in Europe, Asia, and Ethiopia. The offices supported about 700 tier one suppliers on a regular basis. China and Bangladesh were the two largest production markets. H&M’s Supplier Relationship Management system helped H&M Group provide suppliers with production plans well in advance. For the best performing suppliers, order capacity was planned as long as three to five years ahead.

H&M was a participant in the Transparency Pledge, and disclosed details including the name, location, product type, and number of workers employed by each tier one supplier. H&M was also a member of other multi-stakeholder platforms, including ACT (Action, Collaboration, and Transformation), Business for Nature, Global Fashion Agenda, Policy Hub, Sustainable Apparel Coalition, and the UNFCCC Fashion Industry Charter for Climate Action.

H&M in China

H&M began using Chinese suppliers in the 1970s. Zara, H&M’s largest competitor, opened its first store in China in 2006, and H&M followed with a store in Hong Kong in 2007. After Hong Kong, H&M focused on first-tier cities: Beijing, Shanghai, Guangzhou, and Shenzhen.⁵ In 2010, the company began expanding into second-tier cities and, in 2014, added an online store.

In China, H&M targeted young professionals in the growing middle class. Prices in China were often higher than in other markets such as the United States. Store designs were similar to those in other markets and the company usually rented space rather than owning. H&M grew rapidly in China, with 52 new stores in 2012, 71 in 2013, 86 in 2014, and 83 in 2015. By 2015, China was H&M’s fifth largest market, and by 2020 was fourth largest after Germany, United States, and United Kingdom. Sales in China were about 5% of total H&M sales.

Cotton

China replaced the United States as the world's largest cotton-producing country in 1980 and maintained that rank for nearly 35 years starting in 1982. In 2015, China gave up the top spot following reforms to its support for producers and as rising wages reduced the profitability of cotton farming in the Yellow River and Yangtze River basins.⁶ In 2020, India and China produced about the same volume, followed by United States, Brazil, Pakistan, Uzbekistan, Turkey, and Australia. India was expected to be the largest producer in the next few years.

China had about 24 million farmers depending on cotton cultivation. The majority of China's cotton production was in Xinjiang in western China. The Chinese government had developed Xinjiang's cotton industry in the 1970s, 80s, and 90s, investing heavily in infrastructure and using industrial policy to shield it from foreign competition.⁷ Cotton became a core contributor to the province's economy and Xinjiang became a powerhouse cotton producer that served major global fashion brands. In 2020, Xinjiang produced approximately 85% of China's cotton.⁸ According to Chinese government reports, more than 90% of Xinjiang cotton was harvested using machinery.

Better Cotton Initiative

The Better Cotton Initiative (BCI) was launched in 2009 by a group of public and private organizations brought together by IDH, the Sustainable Trade Initiative. BCI's goal was to find more sustainable solutions for farmers, for the environment, and for the various industry participants. BCI was supported by organizations such as adidas, Gap Inc., H&M, International Finance Corp., IKEA, Organic Exchange, Oxfam, VF Corp., and WWF. H&M was one of two retailer/brands on the BCI board (Adidas was the other). BCI and its partners trained farmers on how to use water efficiently, care for the health of the soil and natural habitats, reduce use of the most harmful chemicals, and apply decent work principles. BCI Farmers implementing this system were licensed to sell Better Cotton.

In the 2018-2019 cotton season, 2.1 million licensed BCI Farmers across 23 countries produced 5.6 million tonnes of Better Cotton, which was 22% of global cotton production. At the end of 2019, BCI had more than 1,800 members across the cotton value chain—168 retailers and brands, 1,585 suppliers and manufacturers, 30 producer organizations, 42 civil society members, and 17 associate members. BCI received funding from three sources: earned income for services delivered; grants and donations from private and public funders; and volume-based fees and funding from brands.

A BCI Representative Office was registered in Shanghai in 2012. In 2018-19, about 81,000 licensed BCI Farmers in China produced 896,000 tonnes of Better Cotton on 431,000 hectares, which represented about 15% of total Chinese cotton production.

H&M and Sustainability

H&M achieved its 2020 goal of sourcing all its cotton from three sources: recycled cotton, organic cotton, and cotton sourced through the BCI. "We joined BCI in 2010 to help make cotton production more socially and environmentally sustainable. We work to strengthen the supply of organic cotton as a founding member of the Organic Cotton Accelerator. Now that we have achieved our 2020 goal, we will continue to strengthen our cotton strategy and expand our criteria for cotton sourced in a more sustainable way."⁹ In 2020, 1.9% of H&M's cotton was recycled, 19.9% was organic, and 78.3% was BCI cotton. The company had a 2025 goal of 30% of total materials from recycled sources.

Of the companies analyzed by the Textile Exchange's 2019 Material Change Insights Report, H&M Group led the ranking for use of organic cotton, MMC-fibers, and RDS-certified down, and was one of the world's biggest adopters of recycled cotton, wool, nylon, and lyocell. H&M ranked third in the 2020 Sustainable Cotton Ranking (third in 2019). According to the Head of Sustainability, "We want to use our size and scale to lead the change towards circular and climate positive fashion while being a fair and equal company."¹⁰

H&M required that before entering a business relationship with the company, business partners and suppliers had to agree to the H&M Sustainability Commitment and Code of Ethics. The Sustainability Commitment outlined expectations that included compliance with minimum requirements and international standards. Compliance was monitored using a system of risk-based audits and the Sustainable Impact Partnership Programme.

Petitions, Sanctions, and Xinjiang Cotton

In the years after Xinjiang became designated an autonomous region of China in 1954, China's leadership made a significant effort to assimilate Xinjiang and to ensure its stability. To do so, China built up security measures for the region and encouraged the movement of Han Chinese people to Xinjiang from elsewhere in China. These efforts fostered resentment among Uyghur, Kazak, and Kyrgyz Muslims, who felt that China was directing its actions against them. Additionally, conflicts elsewhere in Central Asia fostered radicalization of some Islamic fundamentalists in Xinjiang and contributed to an influx of weapons. After the Urumqi riots in 2009 and a terrorist attack in Kunming in 2014, the Chinese national government took a hard line, increasing policing and establishing so-called re-education camps.¹¹

Soon after, concerns about forced labor in the region emerged. On March 1, 2020, the Australian Strategic Policy Institute released its *Uyghurs for sale* report, which alleged that from 2017 to 2019 thousands of Uyghurs had been sent to factories around China to work as forced laborers. The report went on to claim that these factories were in the supply chains of over 80 global brands, including Apple, Gap, H&M, Nike, Samsung, Sony, and Volkswagen.¹²

In late March 2020, the BCI suspended its activities in the region in response to allegations of forced labor.¹³ In April 2020, GLAN (Global Legal Action Network) and the World Uyghur Congress submitted evidence to the UK's revenue and customs authority (HMRC) requesting the suspension of imports of cotton goods produced with forced labor in China (Exhibit 1). In August 2020, GLAN and the World Uyghur Congress submitted a similar petition to the United States' Customs and Border Protection.

In July 2020, the U.S. government warned U.S. companies that they could face penalties if they worked with Chinese firms that did business using Xinjiang labor or goods sourced from Xinjiang. The U.S. government put restrictions in place to prevent several Chinese companies from buying American technology, on the basis that these companies were linked to human rights abuses in China.¹⁴

Another petition filed in August 2020 by the Interfaith Center on Corporate Responsibility was signed by the AFL-CIO, Global Labor Justice-International Labor Rights Forum, Corporate Accountability Lab, Freedom United, Human Trafficking Legal Center, Investor Alliance for Human Rights, Uyghur American Association, Uyghur Human Rights Project, and World Uyghur Congress.

H&M Statement on Xinjiang Cotton

In August 2020, H&M issued a statement that said the company had ended an indirect relationship with a cotton supplier in China after allegations of forced labor. **H&M said that it was “deeply concerned** by reports of forced labor and discrimination of ethnoreligious minorities in Xinjiang Uyghur Autonomous Region (XUAR).”¹⁵ The statement included the following:

H&M Group is deeply concerned by reports from civil society organisations and media that include accusations of forced labour and discrimination of ethnoreligious minorities in Xinjiang Uyghur Autonomous Region (XUAR). We strictly prohibit any type of forced labour in our supply chain, regardless of the country or region. If we discover and verify a case of forced labour at a supplier we work with, we will take immediate action and, as an ultimate consequence, look to terminate the business relationship...XUAR is China's largest cotton growing area, and up until now, our suppliers have sourced cotton from farms connected to Better Cotton Initiative (BCI) in the region. As it has become increasingly difficult to conduct credible due diligence in the region, BCI has decided to suspend licensing of BCI cotton in XUAR. This means that cotton for our production will no longer be sourced from there.

After H&M's announcement, the Chinese Foreign Ministry made the following statement: "Under the pretext of 'forced labor,' the relevant country took restrictive measures against Chinese companies, which we firmly oppose. This is a political maneuver that violated international trade rules and sabotages global industrial supply and value chains."¹⁶

In October 2020, BCI stopped all field-level activities in the Xinjiang Uyghur region. The reason provided for the cessation was that "sustained allegations of forced labor and other human rights abuses in the Xinjiang region created an untenable operating environment" (Exhibit 2).

In December 2020, the U.S. government, through the Customs and Border Protection agency, blocked imports of cotton from Xinjiang on the premise of forced labor.

H&M Gets Canceled

On Wednesday March 24, 2021, on the microblogging site Weibo, the Communist Youth League, a youth division of the Chinese Communist Party, accused H&M of lying about human rights abuse in Xinjiang while making a big profit in China. "Wishful thinking," the post said.¹⁷ The post generated many comments—see Exhibit 3 for some examples. Soon after, the search term "H&M" generated no results on Taobao, China's most popular shopping site, and H&M's online store was no longer accessible. Alibaba and JD removed H&M from their online platforms. H&M stores disappeared from online maps. H&M's former brand ambassadors in China, celebrities Huang Xuan and Victoria Song, both issued statements saying they had stopped working with the brand and were against acts aimed at smearing China.¹⁸

After the Communist Youth League started the boycott, more internet users got involved. Some called for a boycott of other brands that pledged to avoid using Xinjiang cotton, including Uniqlo, Nike, and Gap. The Better Cotton Initiative (BCI), a non-profit group that gives sustainability accreditation to businesses, also came under fire. In response, Hong Kong-listed Chinese sportswear company Anta Sports announced on Weibo it would quit BCI. The company said, "We have always been buying and using cotton from Chinese production regions, including Xinjiang cotton."¹⁹ China Central Television (CCTV) said on its social media account, "For enterprises that touch the bottom line of our country, the response is very clear: don't buy."²⁰ In another commentary, CCTV said, "How can H&M eat Chinese rice and then smash China's pot?"

Memes were posted in China proposing new meanings behind the letters H and M: *mian hua* (cotton), *huang miu* (ridiculous), *mo hei* (smears). The official Xinhua news agency posted an illustration depicting the Better Cotton Initiative as a blindfolded puppet controlled by two hands that were patterned like an American flag. The day after the controversy began, a Foreign Ministry spokesperson held up a photo of slaves in American cotton fields during a news briefing. Squirrel Video, a Weibo account dedicated to silly videos, shared the Communist Youth League's original post on H&M with its 10 million followers. A gadget blogger in Chengdu with 1.4 million followers shared a clip showing a worker removing an H&M sign from a mall. A user in Beijing who posted about television stars wrote to his nearly seven million followers, "Today's China is not one that just anyone can bully! We do not ask for trouble, but we are not afraid of trouble either."²¹

Following the online blocking of H&M, BCI deleted from its website the statement about concerns that cotton was being produced by forced labor in Xinjiang. This resulted in accusations that BCI was bowing to pressure from its retail members who were concerned about their brand reputations.

Chinese Government Response

The Chinese Foreign Ministry denied that the government was involved in the boycott against H&M and other brands, and made a number of public statements:

- These foreign companies refuse to use Xinjiang cotton purely on the basis of lies. Of course, this will trigger the Chinese people's dislike and anger. Does the government even need to incite and guide this?²²
- Why do some people hold fast to the idea that this means forced labor and untold suppression? The reason is these things have literally been practiced for over 100 years in their history, so they are now measuring others by their own yardsticks.²³

- The so-called allegations of forced labor, forced sterilization, and human rights abuses in Xinjiang are monstrous lies deliberately fabricated by a few academics and institutions with ulterior motives.
- Workers of all ethnic groups in Xinjiang choose work of their own will. They voluntarily sign contracts with companies in keeping with the principle of equality and will not be discriminated against due to differences in ethnicity, gender, and religious beliefs.
- Anyone who offends the Chinese people should prepare to pay the price.

A spokesperson with the Ministry of Commerce said, “The so-called forced labor in Xinjiang is completely non-existent and imaginary, and the spotless white Xinjiang cotton brooks no smearing.” In May 2021, China’s ambassador to Sweden was asked in an interview what H&M should do to normalize their operations in China. His response was:²⁴

It is easy. They should not listen to the lies of a few people and not politicize normal business. Their operations in China must be based on market conditions and take an objective view. Then they are welcome in China. There are thousands of foreign companies operating in China. They did not listen. But only H&M listened to lies about forced labor in Xinjiang. This is an issue that they should reflect on.

What’s Next for H&M in China?

After H&M issued its March 2021 statement in response to the boycott, the hashtag *#H&M statement didn’t mention Xinjiang#* began trending on China’s Weibo, with users criticizing the company for not explaining why it said it would not source products from Xinjiang in the 2020 statement.²⁵ In June 2021, China’s government accused several Western brands, including H&M, Nike, and Zara, of selling poor quality or unsafe children’s clothes. The announcement by China’s General Administration of Customs cited potentially hazardous dyes and other chemicals in the clothing.

In the March 31, 2021, earnings call, H&M said it wanted to remain a responsible buyer in China. The company declined to publicly quantify the cost of the Chinese backlash, saying only that 20 out of about 500 stores in China were closed. No reasons for the store closures were provided.

Looking forward, how will the boycott impact the H&M brand in China? How will H&M’s decision impact its brand in other markets, such as the U.S., Germany, and the UK? Should H&M change its sourcing stance in China? Which stakeholders should H&M target in its messaging? Should H&M issue new supply chain statements?

Exhibit 1. Excerpts from August 20 Press Release from The Global Legal Action Network and The World Uyghur Congress

The Global Legal Action Network (GLAN), in partnership with the World Uyghur Congress (WUC), have submitted a legal petition to the United States' Customs and Border Protection (CBP) requesting a halt to the importation of cotton goods from East Turkistan (Xinjiang), China. The petition includes evidence of the use of the persecuted Uyghur people in its cotton industry and names a number of major brands that openly source cotton in Xinjiang,

The systematic imprisonment of Uyghurs is intimately linked with the Xinjiang region's cotton industry, which accounts for 84% of the cotton produced by China. Uyghurs are forced to work in factories and prisons in the region—which export products, particularly textiles—to international markets, including to the U.S. Since Xinjiang cotton is so ubiquitous, almost all products made with Chinese cotton are tainted with forced and prison labor, including products manufactured outside Xinjiang and even globally.

Rahima Mahmut, the UK project director for the World Uyghur Congress and a UK resident, said, “It is painful knowing that all of these products sold in both the U.S. and the UK are produced by my people, under terrible conditions of forced labor. As Uyghurs, we want the U.S. government take action to stop the importation of such products to ensure that companies profiting off of these human rights abuses move their supply chains away from China. The Chinese government is systematically forcing huge numbers of people into forced labour. Both the UK and the U.S. governments have made statements condemning these human rights abuses.”

“It’s time that they now also take steps to block these imports and enforce their laws,” said Dearbhla Minogue, a legal officer with GLAN. “This petition is another example of increased international collaboration between organisations who are horrified by the crimes taking place in Xinjiang. China will one day have to accept that the international community will not stand for its abuses.”

GLAN and WUC’s petition requests that CBP prohibit the importation of cotton and cotton-made goods from Xinjiang, China, in a two-phased manner. First, by issuing a Withhold and Release Order (WRO) against all cotton-made goods from the Xinjiang Uyghur Autonomous Region (XUAR), as well as against goods produced by companies outside the XUAR that have subsidiaries or operations in the XUAR. Secondly, importers with suppliers outside of XUAR that source cotton inputs from XUAR should be given a period of six months to shift to suppliers that do not use forced Uyghur labour. If this is not accomplished within six months, the petitioners request CBP to issue another WRO prohibiting cotton-made goods from such suppliers.

Exhibit 2. BCI Statement, October 2020

BCI to Cease all Field-level Activities in the Xinjiang Uyghur Autonomous Region of China

Wednesday, October 21, 2020

Sustained allegations of forced labour and other human rights abuses in the Xinjiang Uyghur Autonomous Region (XUAR) of China have contributed to an increasingly untenable operating environment, and BCI has, therefore, taken the decision to cease all field-level activities in the region effective immediately, including capacity building and data monitoring and reporting.

In March 2020, BCI suspended licensing and assurance activities in the XUAR and, as a result, there is no new licensed Better Cotton coming from the region. Until circumstances change, we will focus our efforts in China in the eastern provinces where BCI has existing programmes: Hubei, Hebei, Shandong and Gansu.

BCI has, for the past eight years, trained Chinese farmers, including Uyghur and Han farmers in the XUAR, on practices that cover our seven core principles on more sustainable cotton production. These include minimising the harmful impact of pesticides and crop protection practices, promoting water stewardship, caring for health of soil, using land responsibly, preserving cotton fibre quality and promoting decent work.

“We look forward to the day when we can again deliver the BCI mission by providing capacity building for all farmers,” commented Alan McClay, BCI CEO. “We will re-evaluate our engagement in the XUAR when the operating environment permits.”

Among a variety of factors that contribute to a challenging operating environment is the recent sanctions order issued by the U.S. Treasury Office of Foreign Assets (OFAC) banning transactions with the Xinjiang Production and Construction Corps (XPCC) and its majority-owned subsidiaries. In the past, XPCC had been a BCI Member and Implementing Partner, however, this relationship was terminated in January, prior to the U.S. sanctions. BCI has taken additional actions and due diligence to comply with the OFAC sanctions. While the latest decision from the BCI Council means that field level activities of all types have ceased effective immediately, Chinese companies from or affiliated with the province that are not blocked by current OFAC sanctions can remain BCI Members and users of the Better Cotton Platform.

Source: <https://www.chinadaily.com.cn/a/202104/15/WS6077f551a31024ad0bab5cd4.html>. Note that the statement by BCI has since been removed from the BCI web site, per the source article in the ChinaDaily.com.

Exhibit 3. Some Weibo Posts about H&M

H&M quit Chinese market now

The company's clothes sucks, and I will no longer buy

Then you can leave China as quickly as you can

Holding such a stance in supporting “human right” in Xinjiang, but on the other hand they abandon the products made in Xinjiang, and if they are intent to wreck the local economy

I heard that you are boycotting Chinese cotton, then I will boycott your products

Source: <https://www.globaltimes.cn/page/202103/1219292.shtml>.
