U.S. Wealth Distribution

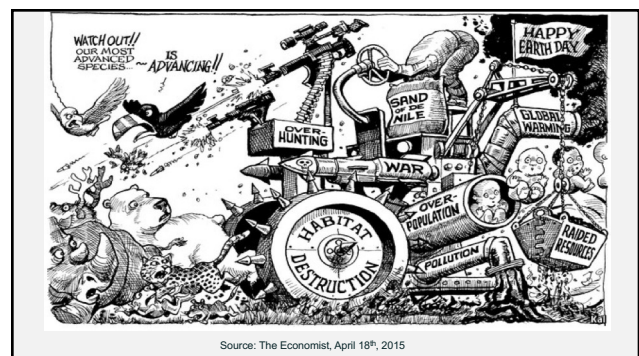

MONITORING WEALTH AT ST. LOUIS
FRED

Name	Period	Value	Preceding Period	Year Ago from Period	Units
Total Assets					
Held by the Top 0.1% (99.9th to 100th Wealth Percentiles)	Q3 2025	25,122,515	23,697,976	22,560,901	Mil. of \$
Held by the 99th to 99.9th Wealth Percentiles	Q3 2025	30,706,509	29,283,574	27,947,369	Mil. of \$
Held by the Top 1% (99th to 100th Wealth Percentiles)	Q3 2025	55,829,024	52,981,550	50,508,270	Mil. of \$
Held by the 90th to 99th Wealth Percentiles	Q3 2025	67,021,963	64,738,464	62,371,943	Mil. of \$
Held by the 50th to 90th Wealth Percentiles	Q3 2025	59,539,812	58,751,680	56,981,194	Mil. of \$
Held by the Bottom 50% (1st to 50th Wealth Percentiles)	Q3 2025	10,246,860	10,069,349	9,829,252	Mil. of \$

Levels of Wealth by Wealth Percentile Groups
The Distributional Financial Accounts (DFAs) provide a quarterly measure of the distribution of U.S. household wealth since 1989, based on a comprehensive integration of disaggregated household-level wealth data with official aggregate wealth measures. The data set contains the level and share of each balance sheet item on the Financial Accounts' household wealth table (Table B.101.h), for each of four percentile groups of wealth: the top 1 percent, the next 9 percent (i.e., 90th to 99th percentile), the next 40 percent (50th to 90th percentile), and the bottom half (below the 50th percentile). The quarterly frequency makes the data useful for studying the business cycle dynamics of wealth concentration—which are typically difficult to observe in lower-frequency data because peaks and troughs often fall between times of measurement. These data will be updated about 10 or 11 weeks after the end of each quarter, making them a timely measure of the distribution of wealth.

Foresight...

For far-sighted companies, the environment may “turn out to be the biggest opportunity for enterprise and invention the industrial world has ever seen.”

— Cairncross, F. 1992

17

“The magnitude of potential opportunities for sustainable entrepreneurship roughly corresponds to the level of degradation of economically-valuable environmental resources”

Dean & McMullen, 2007

SUSTAINABILITY

Saving the Planet from Ecological Disaster Is a \$12 Trillion Opportunity

by John Elkington
May 04, 2017

How can we create \$12 trillion a year in market opportunities by 2030? How about by meeting the UN's Sustainable Development Goals? The goals, a set of 17 stretch goals and 169 related targets championed by the United Nations, are ambitious. But a recent report concludes that meeting the goals in just four out of 60 sectors (food and agriculture, cities, energy and materials, and health and wellbeing) could indeed open up market opportunities worth up to \$12 trillion a year in less than 15 years.
